

Isolation and Aerosol Control

! The Problem

To prevent contamination (including from airborne pathogens) and to control moisture, restorative dentistry requires multiple tools and personnel to achieve isolation. To protect the patient, these measures are necessary and time-consuming.

The DryShield® Solution

- DryShield performs all the tasks of a high-suction evacuator, isolator, bite block, tongue guard, and oral pathway protector in one easy-to-use device.
- The patented DryShield system was designed with the dentist in mind, offering total control of your patient's mouth by keeping the working area dry, clean, and visible.

95%

of dentists report that DryShield made it easier to perform restorative procedures while improving outcomes*

Why it Matters

DryShield is isolation simplified, enhancing productivity and improving outcomes by maintaining a dry field and increasing the likelihood of a successful restoration.

25%
to
40%

faster procedure completion while achieving optimal results*

Reduce Staff Burden

Protect Your Patients

Aerosol Mitigation

Increase Productivity

The only modern isolation system with a full portfolio of both autoclavable and single-use mouthpiece options.

Autoclavable Mouthpieces

Save on consumable cost

Single-Use Mouthpieces

Maximize performance and convenience
