SOLMETEX

NXT Hg5 Amalgam Separator

Amalgam separators provide a practical way for dental practices, the No. 1 source of mercury discharge in the U.S., to capture mercury and other metals before they end up in sewers, drains, and waterways. The EPA's "Dental Amalgam Rule" mandates that both existing and newly built offices install an amalgam separator and recycle amalgam waste within 90 days of opening their doors.

Complying with these guidelines can seem daunting, especially when you consider the negative impact that noncompliance has on the environment. Thankfully, the NXT Hg5 Amalgam Separator from Solmetex makes it both easy and cost effective for practices to safely collect, dispose, and recycle mercury with plenty of guidance along the way.

Making Compliance Easy

The NXT Hg5 takes a total approach to the recycling process by capturing mercury into a collection container that can easily be replaced when full. The full containers are then shipped to an EPA-certified

mercury processing facility via Solmetex's mail-back recycling program. In addition to environmental benefits, every time a practice recycles, Solmetex documents the recycling history in its online Solmetex Compliance Center, where certificates of recycling are accessible 24/7.

The NXT Hg5 series of amalgam separators provides a turnkey solution for practices with 1 to 20 operatories, with installation into a practice's existing plumbing system provided by trained professionals.

FAQ: SOLMETEX MAINTENANCE PROGRAM

The Solmetex Maintenance Program is an enrollment opportunity that allows users to properly handle and recycle dangerous waste without losing focus on patient care. Here's how it works:

- Enrollment allows offices to elect their own auto-shipment schedule of any or all company products to comply with EPA regulations.
- Offices can sign up for the program online, where they can also access certificates of recycling and shipping labels.
- The turnkey auto-fulfillment program is designed to ensure that a practice is in full compliance of EPA guidelines and ready for inspection at any time.
- There are no contracts or fees. Schedules can be completely customized.
