SOLMETEX

NXT DryVac Tankless Dry Vacuum

An easy-to-install and cost-effective vacuum system, the NXT DryVac is a good choice for the environment, patients, the dental team, and your bottom line

It's not the most thrilling tool in your practice, but if it isn't working properly, the whole office goes down with it. We're talking about the dental vacuum system—an essential piece of equipment that helps maintain a clean oral cavity. Whether you're building a new practice or replacing outdated equipment, a dry or wet vacuum system is needed to effectively remove saliva, debris, and bacteria from patients' mouths during procedures.

NXT-Level Vacuum System

A tankless dry vacuum system, the NXT DryVac offers a compact footprint for easy installation, low acquisition costs, and virtually no maintenance. The most cost-effective vacuum system on the market, it features a tankless central suction system that is 100% water free and provides superior operational

performance. Because it requires significantly less water to operate than wet vacuums, practices can expect lower water utility bills, as well as less wear and tear of the equipment from exposure to water minerals.

THE DRYVAC DIFFERENCE:

- **Lightweight tankless design** is easily installed to most pre-existing plumbing, especially for offices with limited space
- **100% water free** with an integrated air/water separation system
- An eco-friendly option that requires significantly less water to operate than wet vacuums, resulting in **lower water utility bills**
- **Affordable price** and minimal operating costs compared with competing dry vacuum systems
- Less exposure to minerals in the water means **fewer maintenance and repairs**
- Compact footprint and **quiet operation**

Keeping It Clean

Solmetex recommends using PowerScrub Vacuum Line Cleaner on a daily basis to break down and eliminate built-up debris in vacuum lines. Using an 100% biodegradable formulation, PowerScrub releases specific enzymes to dissolve vacuum line debris on contact and has a neutral pH between 6 and 8 that meets the EPA's dental requirements. It also contains Mereduce, which is scientifically proven to inhibit the release of harmful mercury.

Not only will PowerScrub keep the NXT DryVac Tankless Dry Vacuum running smoothly, but its continuous use extends the warranty of NXT Hg5 Amalgam Separators from 2 to 5 years.
